

Assingment—7

Task Description #1 (Syntax Errors – Missing Parentheses in Print Statement)

Bug code:

```
name="karthik"
```

```
print(name
```

output:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py"
File "c:\Users\kandi\OneDrive\Desktop\assignment 7\task-1.py", line 2
    print(name
    ^
SyntaxError: '(' was never closed
```

prompt: find the error and fix the error and give correct code.

#The error in the code is that the print statement is not properly closed with a parenthesis. Here is the corrected code: **Correct code:**

```
name = "karthik"
```

```
print(name)
```

output:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py"
karthik
```

Task Description #2 (Incorrect condition in an If Statement)

Bug code:

```
n=10 if
```

```
n=10:
```

```
    print("n is equal to 10") else:
```

```
print("n is not equal to 10")
```

output:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py"
File "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py", line 2
    if n=10:
        ^
SyntaxError: invalid syntax. Maybe you meant '==' or ':=' instead of '='?
```

Prompt: find the error and fix the error and give correct code.

Correct code:

```
n = 10
if n == 10:
    print("n is equal to 10")
else:
    print("n is not equal to 10")
```

Output:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py"
n is equal to 10
```

Task Description #3 (Runtime Error – File Not Found)

Bug code:

```
def read_file(filename):
    with open(filename, 'r') as f:
        return f.read()

print(read_file('nonexistent.txt'))
```

output:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task-1.py"
File "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py", line 1
def read_file(filename): with open(filename, &#39;r&#39;) as f:
                           ^^^^^
SyntaxError: invalid syntax
```

prompt: solve the error and give the correct code and explain that **correct**

code:

#The error in the provided code occurs because the file "nonexistent.txt" does not exist, which raises a FileNotFoundError. To handle this error gracefully, we can use a tryexcept block to catch the exception and provide a meaningful message instead of crashing the program.

#Here is the corrected code with error handling:

```
def read_file(filename):    try:
    with open(filename, 'r') as f:
        return f.read()
except FileNotFoundError:
    return f"Error: The file '{filename}' does not exist."
```

print(read_file("da.txt")) **output:**

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task-1.py"
my name is karthik
```

Task Description #4 (Calling a Non-Existent Method)

Task: Give a class where a non-existent method is called (e.g., `obj.undefined_method()`). Use AI to debug and fix. **Bug code:**

```
class Car: def
start(self):
return "Car started"
my_car = Car()
print(my_car.drive()) output:
```

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task-1.py"
File "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py", line 1
class Car: def start(self):
            ^^^
```

prompt: find the error and fix the error and give correct code.

#The error in the code is that the method 'start' is not properly indented and the method 'drive' is called instead of 'start'. Here is the corrected code:

Correct code:

```
class Car:
    def start(self):
        return "Car started"
```

```
my_car = Car() print(my_car.start())
```

output

:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task-1.py"
Car started
```

Task Description #5 (TypeError – Mixing Strings and Integers in Addition)

Task: Provide code that adds an integer and string ('5' + 2) causing a

TypeError.

Bug code:

```
x="5" y=2
print(x+y)
```

output

:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task
Traceback (most recent call last):
  File "c:/Users/kandi/OneDrive/Desktop/assignment 7/task-1.py", line 3, in <module>
    print(x+y)
          ~^~
TypeError: can only concatenate str (not "int") to str
```

prompt: find the error and fix the error and give correct code.

#The error in the code is that 'x' is a string and 'y' is an integer, which causes a TypeError when trying to add them. To fix this, we can convert 'x' to an integer before adding. Here is the corrected code: **Correct code:**

```
x = "5" y = 2

print(int(x) + y)
```

output

:

```
PS C:\Users\kandi\OneDrive\Desktop\assignment 7> & C:\Users\kandi\AppData\Local\Python\pythoncore-3.14-64\python.exe "c:/Users/kandi/OneDrive/Desktop/assignment
7/task-1.py"
7
```
